

To whom it may concern:

I am currently a student in the Paramedic program through CCAC and would like to express the value that Professor Lippert is to the program. He not only is able to provide very good instruction in line with the book but also provides real life scenarios that we may see as paramedics once out in the field. As a former EMT-B instructor that has taught with a variety of instructors I know that the this is a very valuable skill that many instructors do not provide to the students. Professor Lippert does not settle for just teaching his students the course materials to pass a test. Through his use of these real life scenarios he strives to ensure that his students are able to provide quality of care to the community.

Personally having no experience in reading the cardiac monitor, I struggled through Professor Lippert's section of the class. I was able to achieve a passing grade due to the fact that he is so easy to approach and ask questions. He ensures that when explaining an answer to his students that he not only gives them an answer but explains it in a way that the student understands. Due to this approach of his teaching, I have been able to use the knowledge of reading cardiac rhythms to recently diagnose a patient with having Myocardial infarction and get them to a facility that could provide the appropriate care. Professor Lippert goes beyond creating cookie cutter students who can perform a lists of tasks, he expects his students to have the understanding and background knowledge to explain why they performed the skills that they did.

In conclusion, I feel that Professor Lippert is not only a strong asset to the Paramedic Program at CCAC but to the Emergency Medical Service field in general.

Sincerely,

Caleb S. Wilson, M.H.A
